Modern, wall-mounted, plinth seat. Hardwood battens in 5 colours with a triangular steel frame in 27 powder-coat colours or a galvanised finish.

**Description** Rectangular battens and a triangular steel frame combine to deliver a modern wall-mounted plinth seat design that takes its cues from 20th century industrial design. The functional feel and light appearance of the Avenue plinth seat complements and sits within most public spaces. Finishes include 5 hardwood batten colours and 27 powder-coat finishes or a galvanised finish.

**Made In** Australia

**Dimensions** Hardwood  
1800mmW x 580mmD  
  
2100mmW x 580mmD  
  
30mm thick hardwood  
Recommended installed seat height: 450mm

**Batten Type** Hardwood  
Blackbutt, Spotted Gum, Mixed Red -  
Clear, Mahogany, Ebony Oil

## Care Instructions

### Hardwood

#### Cleaning

Remove any loose surface deposits with a soft bristled brush and wipe down with fresh water and a non-abrasive cloth.

#### Oiling

Oiling of timber will postpone natural greying, repel moisture, improve mould resistance, help maintain a smooth surface texture and enhance the grain and colour.

To maintain, lightly sand rough areas of timber and brush on one coat of timber decking oil every 6 months or as required.

### Powder-Coat

#### Cleaning

Carefully remove any loose surface deposits with a wet sponge or soft bristled brush.

Use a soft (non-abrasive) cloth or brush and a diluted solution of mild detergent and warm water.

Ensure surfaces are thoroughly rinsed with clean fresh water after cleaning to remove all residues.

Never use thinners, abrasive cleaning agents, alcohol-based, acid or alkali cleaning agents.

### Hot-Dip Galvanised Steel

For general cleaning of bulk contaminants such as dirt and the like, ordinary laundry soaps can be satisfactorily used.

For more stubborn or larger areas, the use of a low-pressure wash (eg. a gurney gun) with just pure water or in conjunction with proprietary cleaning materials, such as car wash or truck wash, can be effective. It is important that the steel be washed down with fresh water after cleaning.

The cleaning treatment of the galvanising should be conservative at first and then if the situation demands, the treatment can become steadily more aggressive. Also, wherever some form of mechanical abrasion or “scrubbing” is required, the use of a hard, plastic bristle brush is recommended. Steel bristle brushes are not to be used since they will cause discolouration.

Mechanical methods of cleaning zinc surfaces can cause aesthetic issues. The “cleaned” areas are likely to contrast with adjacent untreated surfaces and may take a significant period of time to weather to a uniform colour. If aesthetics is a large concern, it is advisable to first test the cleaning method in an inconspicuous area in case the aesthetic effect is unappealing.
